

SIMPL SLOT ID MODULE FOR CRESTRON CUSTOM

Revision: 1.00

Date: 06 December 2023

LICENCING

Please visit <https://shop.ultamation.com/> to obtain a licence key for your Crestron processor. Only a single licence is required for each Crestron custom processor and the module can be used multiple times with the same licence.

SUMMARY - WHAT DOES THE MODULE DO?

This module implements self-identification of the program slot of a SIMPL program. When the program starts, if a valid licence key has been input, there will be an integer output with the value of the program slot occupied by the program.

CONFIGURATION

The driver is configured by adding the USP, USH, PDF and CLZ files to your SIMPL Windows project folder and then including the USP in your program.

You will need to configure the licence key you received when purchasing the licence against a specific Crestron custom processor. Multiple instances of the module can be used with the same licence key.

SUPPORT

If you have any issues with a driver or installation please let us know by contacting Ultamation support on support@ultamation.com and please include as much detail about your issue as possible, such a recent processor error log.

Licence verification messages are posted to the error log, so please ensure you have checked this.

LICENCE

This module (including software, images and any and all other associated assets distributed as part of the purchased download package) is licenced on a PER PROCESSOR basis.

A licence key is generated at the point of purchase and is linked at that time to specific information that MUST be provided at the time of purchase. A purchase should not be completed without correct information as refunds cannot be issued for errors or changes made to details following purchase.

The licence key for each device will be delivered via email along with links to download the module. There is no physical delivery.

The module is provided without any warranty with respect to the reliability of the controlled device or changes to device protocol. We will endeavour, through best efforts, to maintain the module's functionality and any bug fixes will be provided free-of-charge. Additional functionality may be released as a variation of this module and this will be a separate, purchasable, product.
