

CRESTRON INTEGRATION MODULE

Revision: 1.01

Date: 13 September 2024

INTRODUCTION

Ultamation's Colour Tools package provides modules to conveniently convert RGB colour values to HSL and HSV formats. Simply input the RGB values, convert, and the corresponding HSV/HSL values will be output.

MODULE DETAILS

To use these modules, first set the analogue inputs to the values to be converted. Then pulse the **Convert** input to trigger the conversion and update the outputs with the converted values.

All analogue input and output values are full-scale (0-65535).
